Definitely agree with this. Written/spoken words can be great for explaining linear processes but can be hard in [#meded](#) when talking about cycles, flowchart/algorithms, etc. Sometimes visual media reduces cog load best because it best represents how we actually think. Just as #meded wasn't thought of as #scholarship pre 1980's-90s... be it curriculum, assessment, mentor/advising... it takes a vocal community to demonstrate that #visualmedia IS scholarship --using evidence! And tonight's #MedEdChat is part of building that coalition!
